**BUILDING*i* TO DEBUT *i*STATION PORTAL: ENSURES ACCURATE, ACCESSIBLE  
FIREHOUSE INFORMATION**

*Anywhere Access Connects Staff to Real-Time Information Ensuring Smart, Safe Decisions*

Seattle, WA – August 10, 2009 – Building*i*, a leader in workplace software management solutions, today announced the availability of *i*Station, a website portal designed exclusively to address the unique needs of Fire and Rescue organizations. The firehouse culture is all about immediate response, but often times firehouse information systems are frustrating to use, and remain a complicated snarl of out-of-date, hard to find information. This slows operations, impacting the flow of critical logistics and important policies, while hampering Chief-to-rank and file communications. *i*Station ignites operational excellence by equipping firefighters with anywhere access to the information they need to be prepared, productive and in sync. *i*Station is currently in use by the Shoreline, Washington Fire Department. Building*i* will debut the *i*Station portal at its booth #5918, in the Technology Pavilion, at the Fire Rescue International (FRI) conference taking place August 25-29, 2009 in Dallas TX (<http://fri.iafc.org/>).

Building*i* Chief Executive Bill Nolan explained why Building*i* chose to leverage its expertise into the Fire and Rescue market. Nolan stated, “As a recognized leader in creating software solutions to help Fortune 1000 firms manage their complex real estate holdings, we realized that our specialized skills in creating bridges between information, technology solutions, and best practices could also help other industries that are trying to manage complex changing information.” Nolan added, “There is nothing more important than keeping our front-line responders safe, well-informed and happy and we believe that the *i*Station portal will do that by simplifying their everyday lives and facilitating operational excellence.”

*i*Station Portal is tightly integrated with familiar stations desktop applications, (TeleStaff, VisiNet, RMS), e-mail, and Web browsers to provide a consistent user experience that simplifies how the Chief, Administration and Fire Fighters interact and communicate important content, processes, and business operations data.

*i*Station Portal is the opening screen as team members “boot up” for the day, the auto pop up feature drives team adoption and fosters roll out success. Fire fighters can access the site from home, starting their day with full view of the “state of the station”. Organizationally, collaboration and communication, visibility and productivity improves in all functional areas with roll out of successful implementation

### *i*Station Features

#### Organization-wide access to information

- Simplifies tracking and reporting: document reviews, approvals and issue tracking
- Enable control of firehouse information: security settings; storage and audit policies; expiration actions
- Connects team to real-time, centralized information: documents, calendars, operations, maintenance, training, Chief communications

#### Easy-to-Use

- Intuitive navigation
- Tight integration with desktop applications, email, web browser
- Accessible anywhere
- Accelerates shared business practices across organizational boundaries

#### Minimal internal IT support

- Building*i* or self-hosted
- Single, integrated platform to manage intranet, expand extranet, and internet applications
- Manages structured and unstructured information across disparate systems
- Proven Microsoft™ SharePoint technology

### **About Building*i***

Building*i* solutions create a bridge between information, technology and best practices. Building*i* specializes in providing high-impact back office technology solutions, best practices and day-to-day strategies to help clients actively and accurately manage their complex and changing information. With a deep history of serving Fortune 1000 corporate real estate teams, Building*i* software solutions are used to manage millions of square feet of facilities world-wide. With the introduction of the *i*Station advanced portal offering, Building*i* deep experience is now being leveraged to help other industries and smaller organizations manage their complex, changing business information. Whether a solution is large or small, all Building*i* offerings support their goal of helping organizations leverage technology so that they can make fast, accurate and informed decisions.
